

STREAMING MEDIA ENCODER

*“the gateway to
web broadcasting”*

If you have a need to encode Video & Audio for streaming over the Intranet or Internet, the E-Mediate Encoder from 4BN offers the affordable solution.

E-mediate with its' simple 'plug & play' technology replaces complex PC "set up" and "configuration".

Simply "plug in" to gain immediate access to the net and broadcast your live Events, TV or Radio to the world at large across the internet, or corporately to the desktop for briefings, conferences, training etc.

4BN's E-mediate Power Point software will enable you to automatically synchronise and broadcast your Power Point Presentations for simultaneous "live" viewing and storage for later "on demand" access.

If you require structured access to your content this can be achieved via 4BN's E- Mediate Indexing/Search software.

4BN's training and conference management system is fully integrated with the above modules providing controlled/secure access to all of your content, it will even handle the billing for chargeable content if required.

The E-mediate System can encode to both Real Networks G2 and Windows Media

The E-mediate Encoder is small and lightweight with an easy-to-learn and quick-to-use touch button interface.

The encoder has an LCD display with a wide viewing angle and excellent visibility, it is backlit for easy viewing in reduced lighting conditions.

The streamline chassis has been designed for ease of carrying. "Rack mounted" systems are available if required.

Each unit has an auto recovery feature that enables the system to automatically recover to its previous settings following for example a power failure, this is essential where remote unattended operation is needed.

The unit is fully upgradable via software downloads or through next day exchange.

The Encoder can be directly connected into any standard network connection (RG45) or alternatively an optional "in built" ISDN interface can be specified. This will automatically connect to the network upon start of encoding.

The E-mediate encoder can be used as a "stand alone" streaming media encoder and broadcast system, or as an uplink to a streaming media server.

A number of models are available offering up to 6 input channels all of which support the encoding of:

Windows Media Services:

Real Networks:

Media Encoder version 4.1

Real Producer version 8.5

Media Encoder version 7

Audio

Media Encoder version 7.1

Video

Audio

Video

The unit comes pre-configured with the standard industry encoding option but can be configured to the users specification via the inbuilt Web administration interface

Prices will be provided on application
